

Load the Dense_Fog_VFX_Demo.unity scene for an example of the fog effects. In the demo scene you'll find the slow dense fog is activated by default; to see the fast dense fog, expand out the Anim_Node in the Hierarchy window, select Dense_Fog_Slow, then untick the box in the top left of the Inspector window to hide it. Then select Dense_Fog_Fast and tick the box in the top left of the Inspector window to show it.

Alternatively, drag the Prefab of the required fog type from the Prefabs folder into your scene. For best results, raise the height of the fog slight above the ground (try 0.88 in the Y axis). For the fog to always surround the player, make the fog a child of the player GameObject.

Have fun!
